

Federal Communications Commission,

I am extremely in favor of a neutral internet. While the absolute best plan moving forward with internet regulation is a discussion that still needs to be had, allowing ISPs to throttle content at this point is a dangerous action.

Also:

Paragraph 82 asks for input on whether throttling should be regulated. In the past ISPs have throttled content based on their own determination of what was lawful or permissible, and had to be forced to stop in the courts. Isn't it possible they could do this again? I'm also concerned by mobile providers who say a plan is "unlimited," but when you exceed the data cap, only throttle sites and services that aren't part of their approved zero-rating network. Thanks for reading my comment.

Thank you,

Lewis Millholland
